

SECURITY SOLUTIONS

The Future of Surveillance is Here

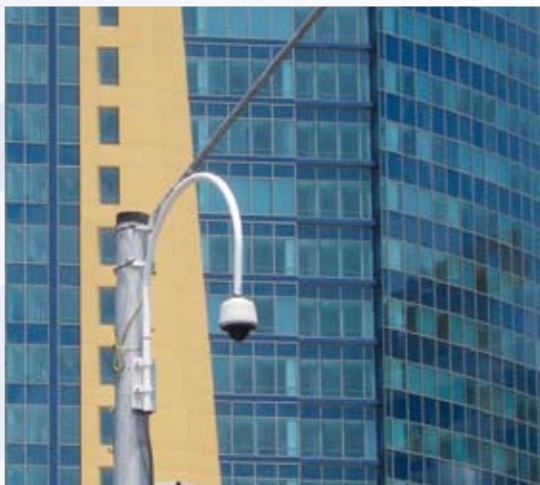

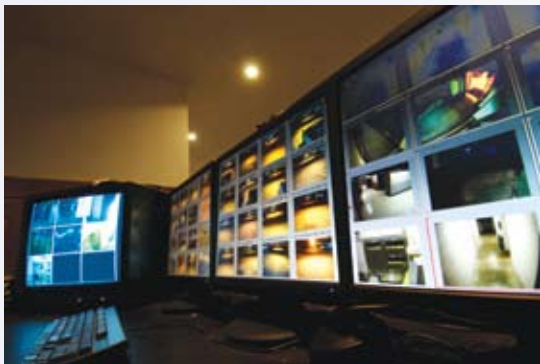

**INTELLIGENT SECURITY
SOLUTIONS**

Video/Security Surveillance

TSTT Security Solutions is the extra eyes and ears to protect property or an event. State-of-the-art technology is now available with all the added extras that can be tailored to suit the needs of your organisation.

It's seamless security surveillance that allows you to go about your business without significantly affecting your bottom line. Get the peace of mind from a system that works like an entire security force, with you at the helm. It's non-intrusive – you and your security team can check in anytime you need to from anywhere you are and it's easy to install and maintain

OTHER KEY BENEFITS OF OUR SYSTEM

- **Remote Monitoring via the Internet:** View from any network computer with Internet access. Simply type the camera's IP address into the web browser's address field to view the live video feed.
- **Monitoring with IP Video Software:** Monitor multiple cameras, event management functions, alarm notification, recording, and more. Choose from basic programs designed for individual users, to advanced solutions for multiple users to access the system simultaneously from different locations.
- **Network Video Recording:** Using IP video software, operators can program for continuous, scheduled, and event-triggered recording and store on hard drive, an FTP server or video servers.
- **Motion Detection:** Program your network camera to begin recording, and perform other functions such as sending automated email alerts, when movement is detected. Conserve bandwidth, save storage space, reduce load on recording servers, and also integrate with other systems such as alarms and access control systems.
- **Lower Operating Costs:** With features like real-time alerting and intelligent search, labor costs of monitoring personnel are significantly reduced
- **Optimized Operations:** With the wealth of information provided in reports, organizations are able to use video to plan staffing requirements better, increase revenues, or improve customer satisfaction.

TSTT Security Solutions offer you VIDEO/SECURITY SURVEILLANCE

Video Cameras/CCTV

Card access

Intrusion Alarms

Secondary services:

- 24 hrs onsite response
- Video monitoring
- Control room environment
- Immediate technical response and off site programming options (card programming etc)

SECURITY MONITORING & MANAGEMENT

- Real time Remote Monitoring (Video, Intrusion and Access Alarms)
- Emergency Protocol Response: a single or mass notification can be send to any response unit (i.e. technical repair team, police, fire fighters)
- Remote Web-based Interface

VIDEO ANALYTICS

Video analytics analyses surveillance video as it's being captured, detecting suspicious activity as it happens. Some of the more common surveillance applications that fall under the video analytics include

- advanced motion detection
- facial recognition
- behavioral recognition
- audio detection
- license plate recognition, and
- the ability to detect very specific events such as a person leaving behind an object, or acts of graffiti and vandalism.

PROVEN SUCCESSES

Summit of the Americas - April 2009

- TSTT built, in record time a Pervasive Video Surveillance Network throughout Port of Spain, Airport and major routes for the Summit of the Americas
- All cameras were IP based
- Two Control Rooms were built for Viewing and Control. Each room operated independently, allowing for full redundancy
- At any location the Central Monitoring Station was able to track vehicles leaving any point of interest until they reached their final destination.
